

# What's new?

Version: 1.2.1

This app is based on **ELO Web Access**, which was developed specially for ELO2011 to create an interface with your ELO Archive. This guarantees you a secure and stable connection to your documents. The app is being developed on an ongoing basis, and version 1.2.1 of the app is currently available.

The app is currently available as a “universal app” for the iPhone and iPad. the layout and functions remain the same for both devices. This will change in later versions of the app. We are developing a specific app for the iPad, which will better suit its larger display.

## The improvements at a glance:

- Relocation from Atom Feet Server to ELO Web Access (available with ELO2011)
- Display the most common document types with a progress bar during download
- New search technology iSearch
- Save photos in the archive (choose a name and appropriate template)
- Create and delete folders in the archive

## Note:

In order to use this app to connect with your archive, you will need the new ELO Web Access module, which is available with ELO 2011. Ask your ELO Business Partner for more details.
